Real time applications slow down due to multiple issues:

- Inefficient coding
- Inadequate Hardware e.g. Storage
- Inadequate Network bandwidth

  Lack of available and skilled resources

HOW DO WE HELP ?

- Analyze the root cause of delays using our proprietary methodology.

- Optimize code, queries and table organizations, use of high speed storage and network bandwidth.

- Automate monitoring of data feeds to detect delays by using our proprietary algorithms.

WHY ARE WE MORE EFFECTIVE ?

- Our true dual shore model offers cost effectiveness, improves operational efficiency and ensures utmost data security.

  - Onsite team will send stats, code and any other required information to offshore team for analysis.

  - Offshore team will develop the plan of action for addressing the issue.

  - Offshore team will develop and test the solution.

  - Onsite team will implement the solution at the client site.
